

**About Andrew:**

Andrew enjoys music and brightly coloured moving images on the computer screen. He is beginning to understand that by pressing the switch he can make an effect happen.

Andrew often has difficulty with removing his hand from the switch so switch is mounted vertically as in the photograph above. Gravity will ensure Andrew's hand drops from the switch.

**Activities:**

Andrew enjoys most cause and effect activities involving music and bright images. He especially likes 'heavy metal' music and is more motivated to use the switch when these are presented.

**Equipment:**

Andrew uses an Ablenet Big Switch mounted on a Variable Friction Mounting Arm.

**Positioning:**

Andrew's switch should be positioned vertically as shown in the photograph above.

**Prompts:**

Andrew responds best to 'More music please'. Andrew may need 'hand over hand' support when first starting the activity. This should be withdrawn as soon as Andrew begins to act independently.
